**Rába Axle Ltd.**

Member of the Rába Group

## ENVIRONMENTAL POLICY

The management of Rába Axle Ltd. is committed to continue to operate, continuously improve and provide the necessary resources for the documented Environmental Management System in accordance with the MSZ EN ISO 14001:2015 standard.

The management's fundamental objectives are to protect the environment, to ensure sustainable development and continuous improvement and to apply the best available techniques.

In order to ensure this, Rába Axle Ltd. sets out the following principles for the environmental aspects of its operations:

- As a company with one of the richest history in Hungary, we want to maintain our reputation in the long term, adding new values and efforts to protect our environment.
- We will do our best to prevent and reduce harmful emissions.
- We will take steps to ensure the good quality of the environment: water, soil, air and the built environment.
- We aim to ensure sustainable development, by minimising the use of materials and energy in the production of our products.
- We constantly seek to apply the best available technology and to operate the Environmental Management System with a view to continuous improvement.
- Management is committed to playing a leading role in setting environmental targets and providing the conditions and means to achieve them,
- We will comply with all our legal obligations and take into account the requirements of our interested parties, and our environmental objectives will be developed with these considerations in mind.

The strategic objectives of our environmental policy are:

- To implement the waste hierarchy and circular economy in practice, and to reduce the specific volume and hazardousness of the waste generated.
- To reduce the quantity and hazard of hazardous substances used in our activities, thereby reducing environmental risks.
- To promote an environmentally responsible and committed attitude in all areas of work, and to provide continuous education and training for employees.
- To invest in energy efficiency and apply a life-cycle approach in the manufacture of our products.
- Transparency towards all interested parties in the environmental aspects of our activities.
